Entomofauna of Turkey (EOT)

Report on the “Entomofauna of Turkey” 2- Index of the recorded species of the Pterygot Insects of Turkey

Ahmet Ömer Koçak Muhabbet Kemal
Mustafa Özdemir Işıl Özdemir

This is the second temporary results¹ of the Project “*Entomofauna of Turkey*” by the Cesa. However, this list is the first, modern comprehensive species list of the Turkish insects published so far (*Lepidoptera* excluded).

The following alphabetical index of the valid specific names of the pterygot insects of Turkey is an initiative one, recorded in the Info-system of the Cesa so far. The scientific names are given below with the authors, usually with the date of publications, and their families. The validity of the names are confirmed here from the taxonomical and nomenclatural standpoints. The synonyms are omitted here. The present list comprises totally 2951 species of the recorded insects in Turkey (*Lepidoptera* excluded). Currently they belong to 1044 genera of 234 family group taxa recorded in Turkey.

Next and more comprehensive reports concerning this ongoing Project will be published in this serial at irregular intervals.
